

We build software for agencies that don't have the bandwidth to build it themselves.

A compact engineering outfit that plugs into your client workflow. We take on the full development cycle so your team stays focused on strategy, design, and the relationship — not on managing dev sprints.

WHAT WE DO

Web application development	React, Next.js, Node
Mobile apps	React Native, iOS & Android
API & backend engineering	REST, GraphQL, microservices
Platform integrations	CRM, payments, third-party APIs
CMS-driven sites	Headless CMS, WordPress, Drupal
UI development	Design handoff to production build
Staff augmentation	Embedded devs in your sprints

HOW WE WORK TOGETHER

- 1 You own the client**
Strategy, design, and relationships stay with your agency. We work behind the scenes.
- 2 We scope as a team**
You share the brief. We break it into milestones, estimates, and a shared timeline.
- 3 Build & review cycle**
Weekly demos, your repo, your Slack. You review like it's an internal team.
- 4 You deliver to client**
Everything goes through you. Your client sees your team. We stay invisible.

TECH WE WORK WITH

React

Next.js

TypeScript

Node.js

Python

PostgreSQL

MongoDB

Redis

GraphQL

React Native

AWS

Docker

GitHub Actions

Figma

WordPress

Drupal
